		More than 5M		100

Account Types	Instruments	Leverage Model	Leverage
Cent	Oil, Crypto	Floating/Fixed	100
	Silver		20

## How Leverage Affects Margin and Position Size

Account Balance	Leverage	Position Size Controlled	Trading Lots	Product	Example of open price	Contract Size	Margin Required	Margin Required
\$1,000	1:1000	\$1,000,000	1	EURUSD	1.12000	100,000 units	\$112	\$1,120
\$2,000	1:500	\$1,000,000	2	XAUUSD	3,800.00	100 oz	\$1,520	\$7,600
\$3,000	1:100	\$300,000	3	NAS100	24,800.00	10 units	\$7,440	\$7,440
\$4,000	1:100	\$400,000	5	BTCSUSD	115,000.00	1 BTC	\$5,750	\$5,750

**Required Margin:** Lot Size × Open Price × Contract Size/Leverage × Exchange rate Converted in USD

**Important Note:**

All leverage selections, whether fixed or floating, remain subject to our Event-Based Margining (EBM) policies.

Leverage adjustments are automatic and based on real-time equity. A lower leverage ratio increases your margin requirement per lot. This can significantly impact your margin level if you have large existing positions open at the time of the adjustment.

We strongly advise all clients to manage their positions and monitor their margin levels carefully, ensuring their account maintains sufficient equity to support their open trades through any automatic leverage changes.
